

Our project aims to build a library management system. We intend to make it an interactive experience which is also easy to use by the users. It will be organised in different layouts such as the customer page (this will be the majority of users) and the management layout (only available to the managers/admins/librarian) which will have different tools, simple and convenient features to administrate and handle the library in a digital format (according to their own roles and permissions). Additionally it will have the ability to display statistics (profits, sales etc) and more features available to those who are authorised.

Members of the team:

Mikel Vangjeli Group Leader

Mikel Skenderi

Vesa Malaj

Sirena Ahemt

Melvina Baci

Gerison Hoxha

Fabian Nikolli

Stakeholders

Team members (as stated above)

Bookstore Employees (Employees who interact with the system such as the admin, manager, librarian etc)

Customers (Customers who interact with the bookstore system, such as browsing books, making purchases, and checking out.)

Suppliers (Publishers, distributors, and vendors who supply books and other merchandise to the bookstore.)

Investors (Individuals with a financial interest in the bookstore's success)

Third-Party Service Providers: (Companies offering services like payment processing, shipping, or marketing integrations.)

Local Community (If the bookstore is a community hub, local residents and organizations may also be stakeholders.)
